

CARE

Computer Assisted Report Entry

REJIS

Partnering with St. Louis County Police Department, REJIS is proud to offer the CARE system. CARE is a computer-based records management system developed in 1984 by St. Louis County Police personnel for the law enforcement community.

The REJIS Commission is a local government agency created to "serve the public interest through delivering quality, cost-effective technology services to the justice community and to government and quasi-government agencies." REJIS' primary focus is to provide record management services to law enforcement, courts and corrections agencies at the local, state and federal levels. This includes interfaces to the Missouri State Highway Patrol MULES system; Missouri Department of Revenue (DOR); the National Crime Information Center (NCIC); the Kansas KCJIS and KDOR; and Nlets. REJIS was founded in 1975 under a cooperative agreement between St. Louis County and the City of St. Louis. Primarily concentrated in the metropolitan St. Louis and Kansas City areas, we service criminal justice agencies in Missouri, Kansas and Illinois.

REJIS services include:

- Development of custom applications
- Installation and support of custom and commercially available software
- Custom interfaces
- IT Support Service
- Data center outsourcing
- Network, training and help desk support

REJIS has approximately 140 employees located at three sites. Most of our staff and equipment are based at the REJIS building, in the Central West End of St. Louis.

For additional information on REJIS services, contact your REJIS Client Services Representative or the REJIS Help Desk (314-535-9497 or 1-888-923-7255).

Benefits and Features

- Jurisdiction based security ensures users see only the information pertinent to their agency in its entirety. CARE allows limited key data sharing with other CARE agencies without obstructing the initial agency's investigation.
- CARE equips officers with information that pertains to people, vehicles, addresses, and more through investigative search tools.
- Export crime data into Excel or Google Maps to properly allocate resources and view current activity.
- The CARE Attachment link allows items of interest to be referenced to a specific report.
- The CARE system and all report data is backed up and maintained by REJIS.
- LETS crash data can be transferred to the CARE system, if an agency chooses.
- Meets NIBRS statistical reporting requirements.
- CARE operates through the CJIS secure REJIS network.
- Multiple report approval levels and report tracking and print history functionality ensure accountability.
- REJIS supports a network with other CARE users to share keen insights on best practices to adapt system to agency's workflow.
- With the use of CARE, an agency can also take advantage of the Case Management system and HUD program.
 - Case Management: Case Management is an extension of CARE which provides a system to control case workflow after a report is entered into the CARE application with detailed case responsibility tracking.
 - **Heads Up Display (HUD):** Application utilizes a map that moves with the car's location, plotting crimes in "real time", and providing officers with continuous updates of law enforcement information relevant to their current location. Available to St. Louis County CARE Agencies.
