REJIS I.A.M.

Identity & Access Management

REJIS

Provide Secure Operator Access Wherever and Whenever With Peace of Mind

Cloud-based business tools, RDP and VPNs give employees access to IT resources outside the typical network perimeter. This results in expanded threat exposure and gives hackers an advantage when targeting applications, employees, and devices. Intelligently designed, workflow enabled and proven at scale, REJIS IAM provides a comprehensive Secure Identity & Access Management platform to meet today's demanding challenges and help you mitigate risk to your customers' networks and digital assets.

Most employees will write down passwords, store them insecurely and/or, they will reuse favorite passwords. Once users are reusing passwords, it only takes one data breach and every account using that password is vulnerable. Without multi-factor authentication (MFA), there's no way of ensuring that the person logging on with the potentially breached credentials is the correct user. Using a password manager will help all employees keep their credentials straight, generate secure passwords, and store their credentials in a secure manner.

KEY BENEFITS

Secure Access

Provide secure access to your customers' critical business applications

Simplicity

Get started in minutes, not hours or days

Efficiency

Intuitive password management & post support session password rotation

Affordability

Enterprise-level product functionality at a fraction of the cost of other solutions

REJIS services include:

- Development of custom applications
- Installation and support of custom and commercially available software
- Custom interfaces
- IT Support Service
- Data center outsourcing
- Network, training and ROC Support
- Information Security Assessment and Advisory

REJIS has approximately 140 employees located at three sites. Most of our staff and equipment are based at the REJIS building, in the Central West End of St. Louis.
